

AlarmDisk™ v2

Fill the Gap in SECURITY

Introducing the newest version of AlarmDisk™ from CPR Tools.

This release provides a wealth of new and useful features including the monitoring and reporting of system time changes, event log changes, user rights adjustments,

system account creation and file system changes for user-selected paths.

Gap in Security

AlarmDisk fills the current gap in computer security. Encryption can be broken and physical security is not an easy task. AlarmDisk reports when your computer has been compromised!

AlarmDisk™ monitors and logs hard drive power cycles as well as many other important security statistics. Log files are encrypted to prevent tampering.

Who Needs AlarmDisk? You do, if:

- You take your laptop on business trips
- You're concerned about being hacked
- You're serious about your system's security
- You're serious about the health of your hard drive

AlarmDisk runs quietly in the background listening and checking the system to ensure security.

If AlarmDisk notices an event that should be reported it will automatically notify the user via the system tray icon.

A yellow alert notification indicates that an event has taken place which you want to be notified about.

A red alert notification indicates a possible system compromise to the user.

Key Features

AlarmDisk™ v2 Monitors:

- ✓ Power Cycle Count for your hard drive
- ✓ USB Viewer

One of the exciting new features in AlarmDisk™ is the ability to monitor USB ports identifying that a USB device was connected to your computer.

- ✓ Monitor Processes
 - ⇒ Creates Baseline
 - ⇒ Compares baseline to current

- ✓ S.M.A.R.T. statistics and warnings
 - ⇒ Monitors Hard Drive Health
 - ⇒ Save data before your drive crashes!
- ✓ Windows Event Logs
 - ⇒ System Time changes
 - ⇒ Startup/Shutdown counts
 - ⇒ Clearing of Security Log
 - ⇒ User rights adjustments
 - ⇒ User password changes
 - ⇒ User account deletions
 - ⇒ Computer Account creations, deletions or modifications
- ✓ Clipboard History
 - ⇒ Copied Files
 - ⇒ Copied Folders
- ✓ File system changes (user selected paths)
 - ⇒ Files created
 - ⇒ Files deleted
 - ⇒ Files renamed

By monitoring and reporting on key system activities, AlarmDisk™ v2 stands alone in its ability to provide one stop security information about computer changes or unauthorized uses of your data.
